

If you choose the hook with message "broken", it may be good to have a safety cover to lock both end caps.  
 If you need a type "Safety, automatic" or "Safety, strong", it will not be better combination called as "Safety cover" type.

If you need a type "Vertical" type, the top end position is important, so you can take a type "No lock".

It is better to change message type "Automatic" or "Strong" type.

For make you want to make a hook with another fit shape, the better message you can use the hook's shape with fit information, and make a fit type.  
 Type "Safety, automatic" or "Safety, strong" is better message.
