Short description:

Rotatable 3D printed ornament, filament spool base, Santa on sleigh pulled by Makey. Merry Christmas!

Description:

3D printed ornament. The sleigh rotates freely around the filament spool base. Santa is being pulled around by his trusty rein-robot Makey, leaving gifts around the tree. The hole for the tree hook is in the middle of the star atop the tree. I recommend doing heavy infill on the base, otherwise the balance may shift depending on the position of the sleigh around the tree. Glue might come in handy to secure the parts, but they should push-fit together. I didn't have time to come up with a more sophisticated assembly method or paint it. Busy holidays! Merry Christmas and happy printing!
