Short description:

A trophy for Fab Lab Tulsa

Description:

<https://youtu.be/s-bARRh3fmM> Fab Lab Tulsa invited our family to be their guests at Tulsa Maker Faire 2019, and of course we gladly accepted. At the end of our day at the event, we purchased t-shirts and very cute small windup "dancing" robots for the entire family. "Fab Lab Tulsa Trophy" is a larger, less complicated, motorized version of the windup dancing robots that I designed, 3D printed and assembled to thank Fab Lab Tulsa for their hospitality and to celebrate their success with Tulsa Maker Faire 2019. With the first trophy completed, everyone who saw it smiled. So I updated the design for family and friends to include animated gear fronts and customized / customizable medallions. I've included the file "Medallion, Blank.stl" to which a 2D printed sticker may be applied for customizing the trophy. As usual, I probably forgot a file or two or who knows what else, so if you have any questions, please do not hesitate to ask as I do make plenty of mistakes. Designed using Autodesk Fusion 360, sliced using Cura 4.2, and printed in PLA on an Ultimaker 2+ Extended and an Ultimaker 3 Extended.

If you can, please use the online documentation found at <http://www.youmagine.com/designs/fab-lab-tulsa-trophy> because those may have been updated. Also, there you can interact and provide praise and/or feedback.
